

MYO-THER GENIE PLUS TABLE CLEANER & DISINFECTANT

DIN 02190826 / DIN 02251868

- Genie Plus is approved by Health Canada as a disinfectant for environmental surfaces in Health Care Facilities & as such possesses a DIN (Drug Identification Number)
- Health Canada DIN search: 02190826 - liquid / 02251868 - wipes
Class: disinfectant; Routes of administration: hospital/health care facilities
<https://health-products.canada.ca/dpd-bdpp/dispatch-repartition.do>
- Genie Plus is NOT a hard surface disinfectant, which is why it is not found on Health Canada's list of approved hard surface disinfectants
- Genie Plus is a low-level hospital grade disinfectant, specifically designed & tested for soft surfaces (like dentist chairs & massage tables)
- The active ingredients in Genie Plus are benzalkonium chloride & benzethonium chloride – also known as quaternary ammonium compounds
- Quaternary Ammonium Compounds (Quats) are considered low-level disinfectants (LLD) & accepted by Health Canada as ingredients that are effective against coronavirus
- Many of the “accepted” hard surface disinfectants contain these very same active ingredients
- BC CDC:
 - Cleaning products and disinfectants that are regularly used in hospitals and health care settings are strong enough to deactivate coronaviruses and prevent their spread.
 - Included on their list: quaternary ammonium compounds.<http://www.bccdc.ca/health-professionals/clinical-resources/covid-19-care/infection-control>
- Quaternary Ammonium Compounds are recommended for use as a low-level detergent disinfectant for environmental surfaces under the “Infection Control for Regulated Professionals Federation Guide.*”
https://www.cmto.com/assets/infection_control_guidelines-1.pdf
- Public Health Ontario:
 - massage/waxing tables/beds covered with a single-use towel or other protective covers are considered a low risk environmental surface, therefore require a low-level disinfectant<https://www.publichealthontario.ca/-/media/documents/G/2019/guide-ipac-personal-service-settings.pdf?la=en> (p. 19-22)
- Upon AOAC testing, which is required by Health Canada for disinfectants, Genie Plus is proven to have 99.9% killing effectiveness against salmonella, staphylococcus, and pseudomonas.
- Massage/Chiropractic/Physiotherapy tables should be routinely cleaned & disinfected between each client (see Infection Control for Regulated Professionals – Environmental Surfaces*). https://www.cmto.com/assets/infection_control_guidelines-1.pdf
- Genie Plus contains surfactants for cleaning and conditioning, and emollients to maintain the suppleness of leather, vinyl or Naugahyde®. Not for use on cloth upholstery.
- Genie Plus will not contribute to the drying & cracking of the surface of your table.

* Included in College of Massage Therapists of Ontario, Standards & Regulations
